# Stocks of Grains

in All Positions

January 26, 1960

## RECORD CORN, WHEAT AND SORGHUM GRAIN STOCKS

Stocks of corn, wheat and sorghum grain in all positions on January 1 continued at record levels. Corn stocks at 4.5 billion bushels were more than a tenth above the record level of January 1, 1959 with wheat and sorghum grain 3 and 25 percent, respectively, above the previous record holdings. Soybean stocks remained near the record level of a year ago but oat, barley and rye stocks dropped well below a year earlier and flaxseed stocks were down sharply. Stocks of feed grains--corn, oats, barley and sorghum grain--totaled 171 million tons, nearly a tenth above the previous record of 156 million tons in storage January 1, 1959.

Stocks of 1,876 million bushels of wheat stored in all positions on January 1 were the largest of record for that date, three percent larger than the previous year and 57 percent above average. The stocks total was two-thirds larger than the 1959 production, continuing to reflect a large carry-over of old wheat on July 1. Current stocks were less than October 1, 1959 stocks by 257 million bushels.

Off-farm wheat stocks of 1,545 million bushels were the largest of record and more than a tenth above the previous year as stocks increased sharply in terminals and interior mills, elevators and warehouses. Total holdings in Kansas were more than a half billion bushels and amounted to nearly one-half the United States wheat production in 1959. Nearly three-fourths of the total stocks were either owned by the Government or were under Government loan. Farm stocks at 332 million bushels were a fourth less than last year and moderately below average.

Rye stocks of 19.9 million bushels stored in all positions on January 1 were almost a fifth below the relatively large stocks a year earlier but 3 percent above average. Stocks on farms and interior mills and elevators were below January 1, 1959 while terminal and stocks in C.C.C. bins were above. Farm stocks at 7.1 million bushels were nearly a half smaller than last year with the proportion of total stocks the fourth smallest of record. Stocks in interior mills and elevators were a fourth smaller than a year earlier but almost a fifth above average. Terminal stocks of 7.8 million bushels were nearly three-fifths above a year ago and 5 percent above average. Holdings in C.C.C. bins were above last year, but still relatively small.

Corn stored in all positions on January 1 was a record 4,453 million bushels --526 million bushels greater than stocks a year earlier. January 1 stocks have increased to a new record each January since 1954. Stocks on farms at 3,094 million bushels were 15 percent above January 1, 1959 and stocks in interior mills,

elevators, and warehouses at 654 million bushels were up 31 percent. Corn in terminals and in C. C. C. owned bins totaled 704 million bushels--4 percent less than a year earlier. About a tenth of the corn stored in off-farm positions was owned by C. C. C. Disappearance of corn from all storage positions during the last quarter of 1959 was 1,067 million bushels compared with 985 million during the last quarter of 1958.

Oats stocks of 775 million bushels in all storage positions on January 1 were 26 percent less than a year earlier and 14 percent below the 1949-58 average. Stocks on farms January 1 at 699 million bushels were 26 percent below a year earlier, 15 percent below average, and the smallest since 1940. Stocks in off-farm storage were 22 percent smaller than a year ago and the lowest for the date in six years. Oats under loan to or owned by C. C. C. totaled less than 3 percent of total stocks this year. Disappearance of oats from October 1 to January 1 reached 235 million bushels--17 percent less than in the same quarter a year earlier and 7 percent below average.

Barley stocks in all positions on January 1, at 361 million bushels, were 33 million bushels below a year earlier but 115 million above January 1 average holdings. Stocks on farms were estimated at 198 million bushels--13 percent less than a year earlier but over a third above average. Off-farm storage of 162 million bushels was 2 percent smaller than a year earlier. About 26 percent of the January 1 stocks were under loan to or owned by C. C. C. compared with about 37 percent a year ago. Disappearance of barley from all storage positions during the October-December quarter was 102 million bushels compared with 108 million for the same period a year earlier.

Sorghum grain stocks in all positions on January 1 totaled a record 902 million bushels. The previous record holdings a year earlier amounted to 719 million bushels. Most of the sorghum grain stocks were again in commercial storages. Off-farm stocks totaled 711 million bushels--35 percent above a year earlier while farm stocks were only 192 million bushels--slightly above a year earlier. Over half of the total January 1 stocks were owned by C. C. C. Disappearance of sorghum grain during the October-December quarter was 187 million bushels, exceeded only by the last quarter of 1958 when 201 million bushels disappeared.

Flaxseed stocks in all storage positions on January 1 totaled 16.3 million bushels. This was only slightly more than half the stocks on hand a year earlier and the smallest stocks of record for that date. Off-farm stocks of 8.7 million bushels were 42 percent less than a year ago with farm stocks 51 percent smaller.

January 1 stocks indicate a disappearance during the half-year--July thru December, 1959--of 21.1 million bushels from a supply of 37.4 million bushels (carry-over of 14.7 million plus 1959 production of 22.7 million bushels). During the period, crushings amounted to 14.4 million bushels and exports amounted to 7.0 million bushels. This accounts for 21.4 million bushels.

(Continued on page 7)

Stocks of grains, January 1, 1960 with comparisons  
(In thousand bushels)

1/ Estimates of the Crop Reporting Board.

2/ Commercial stocks reported by Grain Division, AMS, at 44 Terminal cities.

3/ Owned by C. C. C. and stored in bins or other storages owned or controlled by C. C. C.; other C. C. C. -owned grain is included in the estimates by positions.

4/ All off-farm storages not otherwise designated, including merchant mills.

5/ October estimates reported by Crop Reporting Board. January estimates reported by Census Bureau.

2/ Off-farm total plus farm stocks.

(Continued from page 2)

Soybean stocks of 454 million bushels in all storage positions on January 1 were the second highest of record, being exceeded only by the 471 million bushels on hand a year earlier. Terminal and oilseed processors stocks were slightly above a year ago but these were more than offset by smaller stocks on farms and in other off-farm positions.

Stocks on January 1 indicated a disappearance during the October-December quarter of 146 million bushels from a supply of 600 million bushels (carry-over of 62 million plus 1959 production of 538 million bushels). During the quarter, 105 million bushels were processed for oil and about 57 million bushels were exported. In past years such indicated differences have generally disappeared by the end of the marketing year when the final check is made.
